

## Alan Negmanov

### Python Developer (AI & Automation)

- **Location:** Daegu, South Korea (GMT +9)
- **Specialization:** High-performance Python services, AI model integration, asynchronous systems
- **Employment:** Remote, full-time.

### Contacts

- **Phone:** +7 (700) 270-89-43 / +82-(010)-2604-0667
- **Telegram:** [t.me/neumannangel](https://t.me/neumannangel)
- **LinkedIn:** [Alan Negmanov | LinkedIn](#)
- **Email:** [uni.anegmanov@gmail.com](mailto:uni.anegmanov@gmail.com)
- **Citizenship:** Kazakhstan

### About Me

I study in South Korea and enjoy building asynchronous backend solutions with AI integration and automating browser scenarios. I like multithreading and maximum efficiency. I have won various startup competitions and have experience in commercial development.

### Key Achievements (2023)

- **Winner of the national Samsung Solve for Tomorrow** competition (1st place) (\$8,000): Developed and successfully defended an early fire detection system based on AI and computer vision.
- **Prize-winner at UNESCO “Turaqty Zhol”** (3rd place) (\$4,000): Received a grant for developing a technological solution in the field of environmental safety and sustainable development.
- **Winner of Digital Bridge** (Astana Hub, 1,000,000 KZT): The project was recognized as one of the best tech startups at the largest IT forum in Central Asia.

## Technical Skills

| Category        | Technologies                                                                                                                            |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Core Python     | Python, Asyncio, aiohttp, threading, multiprocessing                                                                                    |
| Backend & API   | FastAPI, Flask, SQLAlchemy, PostgreSQL, SQLite, JWT, Pydantic, Uvicorn                                                                  |
| AI / ML & Audio | PyTorch, OpenAI API, Google GenAI (Gemini), Whisper (STT), Pyannote.audio, Librosa                                                      |
| Automation      | Playwright, Selenium Wire, BeautifulSoup4, Stealth-scraping, Proxy Rotation                                                             |
| DevOps & Tools  | Docker, Docker Compose, Git, Linux, Nginx, Postman, Incident Response, Digital Forensics (audit logs), Cybersecurity (malware analysis) |
| Bots            | Aiogram (v3), Telethon, python-telegram-bot                                                                                             |

## Work Experience

2020 — present

- **Telegram Moderation System:** Developed an asynchronous anti-spam engine based on Gemini 1.5. Implemented custom request batching via asyncio.Queue, which reduced false positives by 90%.
- **Development of Complex Telegram Ecosystems:** Designed and implemented the architecture of several interconnected bots (admin panels, user interfaces, service modules) operating with a single PostgreSQL database.
- **Development of Endpoints:** Created endpoints for generating QR codes and referral links for a tournament web service.
- **Fraud Prevention:** In a critical situation, detected and neutralized malicious code (crypto-clipper) embedded in a Telegram bot for substituting USDT TRC-20 addresses.
- **Digital Investigation:** Performed an audit of server access logs, identified unauthorized access, and found the culprit (a former developer).
- **Crisis Management:** Stabilized the service, implemented an extended logging system, and coordinated communication with users to minimize reputational risks.
- **Audio Processing Service (STT/Diarization):** Built a pipeline for speech recognition and speaker diarization (Whisper + Pyannote). Optimized CPU load using ProcessPoolExecutor.
- **Scalable Parsing:** Developed parsers for Instagram and Faceit using Playwright with anti-fraud bypass and proxy rotation.
- **Teaching:** Trained high school students in Python fundamentals (syntax, logic, algorithms).
- **FACEIT Parser:** Created a multi-feature parser for game statistics using

asynchronous libraries.

- **DGIST Helper (Chrome Extension):** Designed and implemented a browser extension for the DGIST university portal (South Korea), automating students' routine actions and improving the UX of the internal portal.

## Education

- **NIS PM (Nazarbayev Intellectual School of Physics and Mathematics)**, Astana, Kazakhstan (2019–2025)
- **DGIST (Daegu Gyeongbuk Institute of Science and Technology)**, South Korea  
Bachelor's student, Computer Science (current)

## Languages

- **English: C1** (Advanced)
- **Korean: Level 2** (B1/B2 in progress)
- **Kazakh: Native**
- **Russian: Native**
